

THE BROWNSTONE RESEARCH CATALOG

EXECUTIVE-LEVEL RESEARCH
FOR THE EVERYDAY INVESTOR

A LETTER FROM THE FOUNDER OF BROWNSTONE RESEARCH

Dear Investor,

Hello and welcome to Brownstone Research. My name is Jeff Brown, founder and chief investment analyst.

For nearly 30 years, I have worked at the forefront of bleeding-edge technology. I have sold billions of dollars of technology products, and I have invested in more than 100 early stage technology companies. In addition to my formal education at Purdue University, the London Business School, and Yale, I have received professional certifications from the likes of MIT, Stanford, the UC Berkeley School of Law, and the National University of Singapore.

In other words, I have devoted my life to working with, studying, and investing in high technology.

But in all my years as a technology executive and angel investor, one thing became clear to me. The best investment opportunities – in both public and private markets – are typically only accessible to a select group. I'm talking about investment banks, hedge funds, private equity, and high-net-worth clients.

My mission with Brownstone Research was to change that. Today, I use my decades of experience as a technology executive to deliver executive-level research to all investors.

Whether you are a life-long investor or are just beginning your journey toward financial independence, it's great to have you on board.

In this catalog, you will meet the team here at Brownstone Research and learn more about the research products we produce on behalf of our subscribers.

Regards,

Jeff Brown

Founder and Chief Investment Analyst, Brownstone Research

ABOUT US

Brownstone Research is a boutique publishing house that delivers world-class technology research.

For too long, the best investment research has been locked away from retail investors. It is typically reserved for investment banks and venture capital firms.

The mission of Brownstone Research is to deliver executive-level investment research to all who seek it.

Founder Jeff Brown is a high-technology executive with nearly 30 years of experience.

And as an active angel investor, Jeff has seen firsthand the wealth-creating potential of disruptive technology.

Today, Jeff Brown uses his technology and investing expertise to help everyday investors pinpoint companies on the verge of exponential growth.

THE BROWNSTONE RESEARCH TEAM

JEFF BROWN

Jeff Brown is the founder and chief investment analyst for Brownstone Research. Before founding Brownstone Research, Jeff spent 25+ years as a high-technology executive. He worked at an executive level for some of the best technology companies in the world, like Qualcomm, NXP Semiconductors, and Juniper Networks.

As an active and successful angel investor in early stage technology companies, he has access to information the public never sees. He is on the front line, in the field, seeing things months, if not years, before the mass market becomes aware.

Jeff has a wide range of technology industry experience. From semiconductors to mobility... to broadcasting and video technology... to technology infrastructure... to IT networking and security... to automotive and even consumer electronics... he's done it all. He has built organizations from the ground up and run divisions of companies generating hundreds of millions in revenue a year.

Though he was born, educated, and began his career in America, he spent two decades living and working in international markets, with much of that time spent in Tokyo, Japan. That gives him a unique global perspective on business, investing, and analysis.

Jeff earned his undergraduate degree in aeronautical and astronautical engineering from Purdue University. He also earned his master's degree in management from the London Business School. Jeff is also an alumnus of Yale University's School of Management. In addition to formal degrees, Jeff has professional certificates from MIT, Stanford, UC Berkeley's School of Law, and the National University of Singapore. Jeff is an active board member and adviser to several companies and an active angel investor.

Today, Jeff uses his technology, business, finance, and investing expertise to help everyday investors discover companies on the verge of exponential growth.

THE BROWNSTONE RESEARCH TEAM

ANDREW HODGES

During his undergraduate education, Andrew Hodges studied economics at Clemson University and Georgetown University. He then moved out west to complete graduate studies in economics and water markets while working with the National Oceanic Atmospheric Association. After spending nearly half a decade in finance, he fell down the rabbit hole of digital assets in 2015. Several years later, Andrew made the leap in researching digital assets full-time. He now leverages his background in applied economics, commodity markets, and finance to provide independent investment research on the industry. Today, Andrew works behind the scenes as an analyst for Brownstone Research.

NICK ROKKE

Nick Rokke is an analyst with Brownstone Research. He graduated college with an accounting degree and quickly became a certified public accountant (CPA) while working at a Big Four accounting firm. Later, he joined a hedge fund accounting firm, where he discovered how some of the world's most successful (and unsuccessful) hedge funds traded. Nick then took the chartered financial analyst (CFA) tests – the gold standard for financial analysts. After passing all three tests the first time (something only 9% of CFA candidates do), he earned his charter. Today, he uses his analytical and market expertise to support the research efforts of Brownstone Research.

THE BROWNSTONE RESEARCH TEAM

JOE WITHROW

Joe Withrow began his career in finance in the corporate banking arena, working as a credit risk analyst for commercial lending. After the 2008 financial crisis, Joe worked in loss mitigation. And he went on to manage a multimillion-dollar portfolio in the special assets division of one of America's top banks. In 2014, Joe discovered bitcoin and became an early adopter and vocal advocate for digital assets. Then, after nearly a decade in corporate banking, Joe made the leap to independent investment research. Today, Joe works behind the scenes as an analyst for Brownstone Research.

INVESTMENT RESEARCH PRODUCTS

THE BLEEDING EDGE

The Bleeding Edge is the only free newsletter that features tech investing expert Jeff Brown. With nearly 30 years of experience as a high-technology executive, Jeff's insights into the world of tech investing are unrivaled.

Jeff accurately predicted the rise of cryptocurrencies, the creation of 5G wireless networks, and the world-changing impacts of artificial intelligence. And he did it all years before the mainstream media or the financial press caught on.

Sometimes, Jeff uncovers a breakthrough technology that's being overlooked by the mainstream. Other times, he'll show the real story behind the top tech headlines of the day. And he'll even highlight emerging technology plays that investors need to keep on their radar.

With *The Bleeding Edge*, you have direct access to insights from a true Silicon Valley insider. In short, it's a window into a world of high technology that you won't find anywhere else.

THE NEAR FUTURE REPORT

The Near Future Report is an investment advisory focused on identifying the trends of today – those right around the corner on the point of mass adoption. Our large-capitalization growth stocks connect to revolutionary shifts in technology like 5G, artificial intelligence, cloud computing, and more... And they are reliable, “sleep well at night” picks that have the potential for double-digit returns.

With each monthly issue of *The Near Future Report*, you see Jeff's knack for identifying companies at the doorstep of enormous growth. He'll tell you everything you need to know about the most innovative trends out there. He'll also spotlight new technologies he's tracking. And most importantly, he'll give you easy-to-follow recommendations for generating solid profits from emerging trends.

INVESTMENT RESEARCH PRODUCTS

Exponential Tech Investor

Exponential Tech Investor is an investment advisory service focused on identifying small- and micro-cap technology companies... companies that are poised for breakthrough growth... companies that have the promise to deliver exponential profits.

And we get in early... before mainstream and institutional buyers rush in to buy. The stocks we invest in have the potential to double or triple – at a minimum – within 18 months. Some have the potential for as much as 10x. And they relate to some of the most explosive trends in technology: 5G, cybersecurity, artificial intelligence, biotech, and more.

With each monthly issue of *Exponential Tech Investor*, you'll receive Jeff's newest recommendation with clear, easy-to-follow instructions. In addition, he'll provide in-depth research, explaining his behind-the-scenes insight on some of the most bleeding-edge tech and innovative companies in existence.

DAY ONE INVESTOR

Day One Investor is an investment service focused on private investments. After more than six years of extensive research, Jeff Brown is finally able to put his experience as an angel investor to work on behalf of his readers.

Day One Investor helps subscribers invest on “day one,” when the biggest gains are possible. That is why Jeff has worked so hard to bring these investments to all of his subscribers, even those who are not accredited investors. In this service, he will profile the best Reg CF and Reg A/A+ deals and offer key insights into the private investing space.

INVESTMENT RESEARCH PRODUCTS

UNCHAINED PROFITS

Unchained Profits is an investment service focused on the growing blockchain and cryptocurrency space. With the rapid pace of innovation and advances in this field of technology, there is nearly unlimited potential within this sphere. Blockchain technology and crypto are disrupting many of our legacy systems and improving lives in the process.

In *Unchained Profits*, we share cutting-edge research on stocks, tokens, platforms, and other projects that have high profit potential. And we publish monthly updates to provide the latest information for subscribers.

Finally, we also offer a *Pro* version of this service for investors who want to take these investments to the next level.

NEURAL NET PROFITS

Neural Net Profits is unlike any research product offered by Brownstone Research. Here, editor Jeff Brown uses the power of artificial intelligence to spot crypto trading opportunities that are invisible to humans.

Using a proprietary neural network—known as “The Perceptron”—Jeff and his team identify cryptocurrencies on the verge of explosive moves in the next 60 days.

Neural Net Profits is an active trading research service. It is ideal for engaged cryptocurrency investors that are looking to profit from short-term moves in the cryptocurrency market.
